## Cluster Purpose

The Clean Energy Cluster is a group of like minded businesses and organizations that work cohesively to address issues that affect the industry as a whole.

Through collaboration, the Clean Energy Cluster can improve the health of the local clean energy industry by removing barriers to industry growth and development, providing support to local energy programs and educational institutions, and educating and informing the local community about clean energy efforts and topics that might affect local business development.

Let's work together to make an impact! As Aristotle said, "The whole is greater than the sum of its parts."

## Mission Statement

To facilitate the growth, viability, and visibility of Clean Energy through the collaborative effort of dedicated professionals in the production, manufacturing, education, and public sectors.

## Short-term Goals

1. Strengthen existing workforce development efforts	Participant	Deadline
A. CSUF College of Science & Math	Brian Boroski	Ongoing
